

Reinforced Glue Tabs

Folders with reinforced glue tabs include the PF7, TF2, CP1, PF10, and PF11.

The tabs fold over from the outside to the inside and overlap the pockets.

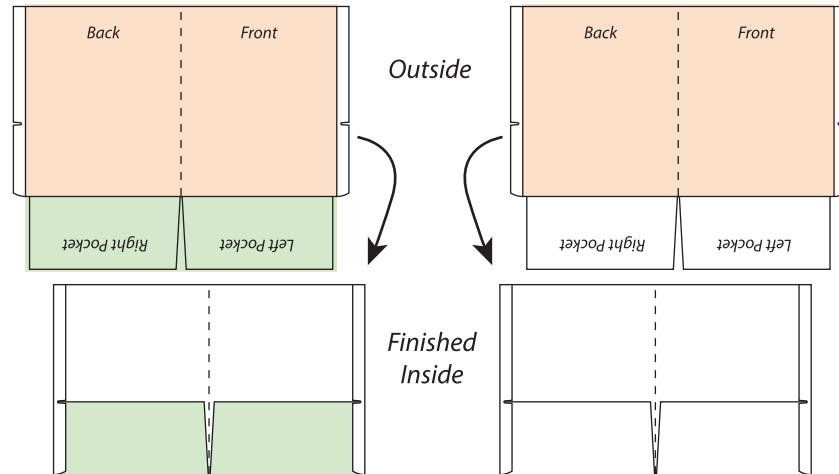

If you know how you want your glue tabs set up but are unsure how to do it, let us know. We can probably do it for you!

Option A

No ink on the glue tabs.

On the finished folders, the glue tabs will be the paper color (usually white).

Best option when there is no or very little printing on the pockets.

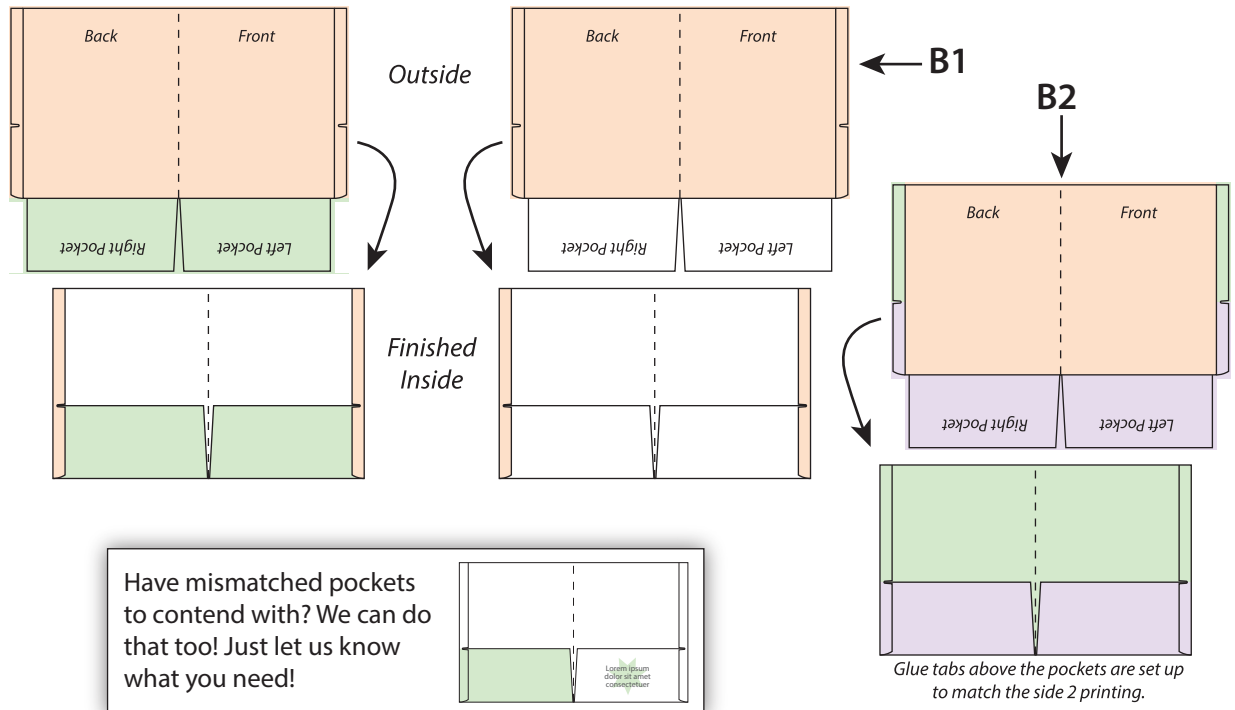

Options B1 & B2

Full printing on glue tabs.

The printing on the glue tabs will appear on the inside of the finished folder.

B1 Glue tabs are a continuation of the art from the front/back covers.

B2 Glue tabs match the design on the pockets and inside above pockets.

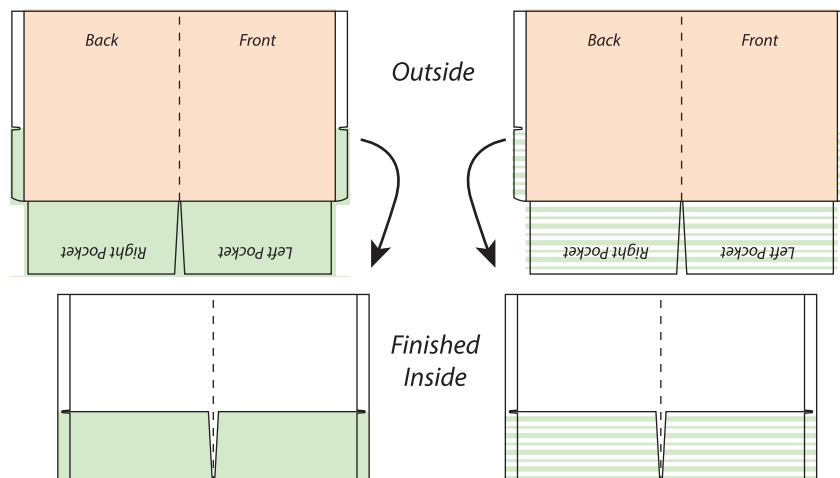

Option C

Ink on pocket portion of tabs only.

On the finished folders, the printed glue tabs will line up with the pockets and have no printing on the tabs above the pockets.

Ideal when there's no or very little side 2 printing.

Graphics from the pockets can be duplicated onto the glue tabs so they line up and create an almost seamless transition from tab to pocket.
